MICROAIR RP1 TWISTER

AQUEST CORPORATION has utilized the MicroAir RP1 “Twister” to great success on various dust collection applications. The RP1 Twister is a versatile 1,000 cfm cartridge collector unit, which meets the OSHA / NFPA combustible dust standards by adhering to the design requirements of NFPA 654 7.13.1.1.2. The RP1 Twister allows customers, who have small dust producing applications, to adequately and affordably control the dust without the need to design and install costly explosion mitigation devices. The unit can be hung from the ceiling, mounted to the wall or lagged to the ground. The system can be fitted with various types of custom hoods or source capture arms, and it returns exhaust air back into the building.
