AQUEST PROJECT BULLETIN

INDUSTRIAL CROSS DRAFT SPRAY PAINT BOOTH

AQUEST CORPORATION was awarded a high-profile contract to provide a 20' wide, 20' tall, 100' long spray paint booth by HOLTEC INTERNATIONAL in New Jersey. The cross draft style paint booth featured a drive-through design with a partition door in the middle to allow for the booth to be split and utilized as two independent 50' booths, or as a single 100' booth. Aquest developed a customized solution to meet the unique challenges associated with this project – from specialized controls to safely operate with the partition door up or down, to routing intake and exhaust ducts out the side of the building to avoid interfering with the facility's gantry crane. We are confident we can provide solutions for any air filtration need.
